Data Sharing and ATFM

Cyriel Kronenburg
Vice President Aviation Solutions, Aireon
It’s All About the Data

• The value and effectiveness of ATFM is closely linked to the completeness and quality of the data used and the ability to share this data amongst stakeholders.

• Most existing ATFM tools are very capable of predicting and modeling trajectory, but they are most efficient in areas where the ANSP has surveillance and control.

• The success of regional systems relies on the provision of data by all participants, or large domestic airspaces where the possible range of influencing is highest.
